Many theories exist regarding the unique nature of the flora and fauna on the Galapagos islands. A popularly held belief is that the original species that evolved into the unique Galapagos variety found their way to the islands on flotation rafts of vegetation and other waste and were carried to the island via wind and sea currents.

The dodo (*Raphus cucullatus*) is an extinct flightless bird that was endemic to the island of Mauritius, east of Madagascar in the Indian Ocean. The dodo's closest genetic relative was the also-extinct *Rodrigues solitaire*, the two forming the subfamily *Raphinae* of the family of pigeons and doves. The closest living relative of the dodo is the Nicobar pigeon. A white dodo was once thought to have ...

Vision - Birds, with the possible exception of diurnal primates (e.g., humans), are the vertebrates which may rely most heavily on vision to function in their environment. The most obvious visually-dependent behavior of birds is flight, but birds also exhibit an impressive range of visually-guided behaviors other than flight, e.g., foraging, predator detection, & mate choice.

Conservation - Calculating background extinction rates: To discern the effect of modern human activity on the loss of species requires determining how fast species disappeared in the absence of that activity. Studies of marine fossils show that species last about 1–10 million years. Assume that all these extinctions happened independently and gradually—i.e., the “normal” way—rather ...

Habitat Animal Printouts. The Earth has many different environments, varying in temperature, moisture, light, and many other factors. Each of these habitats has distinct life forms living in it, forming complex communities of interdependent organisms. A complex community of plants and animals in a region and a climate is called a biome.
